Penile rehabilitation ("rehab") is commonly used to get the blood flowing and maintain penile tissue oxygenation and elasticity, expediting erectile recovery. Given the choice between a twenty-cent treatment and one that costs a dollar, the cheaper treatment always wins. The only exception is verapamil, which has shown to be somewhat more effective than a placebo, but the studies were fairly small. A history of cardiac disease, and one 72-year-old man with a history of coronary artery disease who developed
